As more and more women over 30 are having children, amniocentesis, primarily used as a test for Down's syndrome, is becoming a routine part of prenatal care. In this book, Barbara Katz Rothman shows how this simple procedure can alter the way we think about childbirth and parenthood and force us to confront agonizing dilemmas: what do you do if there is a "problem" with the foetus? What kind of support is available if you decide to bring up a handicapped child? How can you come to terms with the decision to terminate a wanted pregnancy?

## 评论

羊穿（或者更广泛的医疗技术）与母职的关系，女性选择，甚至无创都有所涉及，内容很广泛，通过访谈的方式了解了不少女性关于选择性流产、羊穿技术过程、怀孕和胎儿联系等母职体验，技术改变了女性怀孕过程中的状态，将其变为一种更加具有不确定性的过程，女性随时可能要做好准备和已经建立情感联系的胎儿“分离”。risk and safety discourse on choices women made concerning technology.

另外，母职与技术。
