装帧:Hardcover

isbn:9780300176445

Any scientist or engineer who communicates research results will immediately recognize this practical handbook as an indispensable tool. The guide sets out clear strategies and offers abundant examples to assist researchers - even those with no previous design training - with creating effective visual graphics for use in multiple contexts, including journal submissions, grant proposals, conference posters, or presentations. Visual communicator Felice Frankel and systems biologist Angela

DePace, along with experts in various fields, demonstrate how small changes can vastly improve the success of a graphic image. They dissect individual graphics, show why some work while others don't, and suggest specific improvements. The book includes analyses of graphics that have appeared in such journals as "Science", "Nature", "Annual Reviews", "Cell", "PNAS", and "The New England Journal of Medicine", as well as an insightful personal conversation with designer Stefan Sagmeister and narratives by prominent researchers and animators.

评论

图都不错，不过所谓strategies都是一些基本常识吧，而且零散不成系统。

-----  
图漂亮而已。没有什么特别的具体讨论strategy，没学到什么东西。
