With an extensive catalog at its heart, Prehistoric Life profiles hundreds of fascinating species in incredible detail. The story starts in earnest 3.8 billion years ago, with the earliest-known form of life on Earth, a bacteria that still exists today, and journeys through action-packed millennia, charting the appearance of new life forms as well as devastating extinction events. Of course, the ever-popular and endlessly intriguing

dinosaurs feature large, but Prehistoric Life gives you the whole picture, and the plants, invertebrates, amphibians, birds, reptiles, and mammals that are the ancestors of today's species also populate its pages, making this book unprecedented in its coverage of prehistory. Specially commissioned artworks use cutting-edge technology to render species in breathtakingly realistic fashion, with astonishing images of prehistoric remains, such as skeletons and fossils, to complete the story. To put all the evidence in context, the concept of geological time is explored, as is the classification of species and how the evidence for their evolution is preserved and can be deciphered.

评论

本书印刷非常精美。详细的叙述了从太古代到第四纪的生物进化历程。其中包含了化石的图和根据化石构建的古代动物模型。除了图外，其文字部分也很有价值。叙述了目前对生物进化的主要论点。其内容与目前的理论发展接轨。展示了很多目前最新的发现和理论。比如，显示了中国辽宁发现的很多原始鸟的化石以及有关前寒武纪的全球冰川理论等。一个缺点是，文字太小。读起来比较费劲。
