This is a thoroughly updated and revised edition of our highly acclaimed university

textbook on the science of parapsychology. The objective of this book is to provide an introductory survey of parapsychologists' efforts to explore the authenticity and bases of anomalous, apparently paranormal phenomena. It outlines the origins of parapsychological research and critically reviews investigations of extrasensory perception, psychokinesis, poltergeist phenomena, near-death and out-of-body experiences, and the evaluation of parapsychology as a scientific enterprise.

作者介绍:

Irwin is an internationally recognized parapsychologist. He is retired as associate professor in psychology from the University of New England, Australia.
