In Human-Built World, Thomas P. Hughes restores to technology the richness and depth it deserves by writing its intellectual history. Chronicling the ideas about technology expressed by influential Western thinkers who not only understood its multifaceted character but who also explored its creative potential, Hughes draws on an enormous range of literature, art, and architecture to explore what technology has brought to society and culture. From the "Creator" model of development of the sixteenth century to the "big science" of the 1940s and 1950s to the architecture of Frank Gehry and Hughes's concept of "ecotechnology," Human-Built World nimbly charts the myriad ways that technology has been woven into the social and cultural fabric of different eras and the promises and problems it has offered.

虽然跟我看待科技的思路不同，但也有所启发。
