Aya Takano is part of Takashi Murakami's "Hiropon Factory" ground zero for the new

"Superflat" style, coined by Murakami. Superflat is basically Pop art which uses Japanese pop culture imagery. More broadly it encompasses traditional Asian compositions and subject matter, science fiction, anime, and manga. Murakami has written a couple books outlining the manifesto of the movement which explain it better than I can. In my opinion, Takano has surpassed her patron in that she continues to play on pop culture without losing luscious texture and subtly satirical subjects captured in Roald Dahl contours and fantasy. Takano's work is a rollercoaster ride of juicy color, fluid figure drawing and delicate sci-fi twists, worth every penny!
