《维持黄河健康生命(英文)》主要内容：河流孕育了人类文明，但人类在发展的过程中却造成了对河流的伤害，并为此付出了代价。一个时期以来，黄河存在且日益严重的主河槽淤积、萎缩。“二级悬河”形势严峻，水资源供求矛盾尖锐，水污染加剧等问题，无不反映出黄河的生存危机。因此，作者提出黄河治理的终极目标是维持黄河健康生命，据此建立了“1493”治河体系。同时，还就调水调沙不同模式，黄河洪水的控制、利用、塑造，粗泥沙控制的“三道防线”，构建黄河水沙调控体系，以及黄河下游河道治理等内容进行了阐述。

Rivers have bred the civilization of Homo sapiens, who in the process of their development caused harm to rivers and paid prices for such deeds. For a long period of time, the Yellow River has been suffering from such problems as ever-deteriorating sedimentation and shrinkage of the main channel, pressing situation of “secondary hanging river”, aggravating water pollution, and increasing contradiction between supply and demand of water resources, all of which without exception reflect the subsistence crisis of the Yellow River. Therefore, the author advocates that maintaining the healthy life of the Yellow River be the ultimate goal of the Yellow River harnessing, based on which the river harnessing system of “1493” is set up; furthermore, the author elaborates on the modes of water and sediment regulation, the control, utilization and modeling of flood, the “three lines of defense” for control of coarse sediment, the establishment of water and sediment regulation system as well as the strategies for downstream channel harnessing of the Yellow River.
