Hematology in Clinical Practice, Third Edition, is written specifically for clinicians-students, residents in training, primary care internists or family practitioners, and clinical hematologists/oncologists. It is a practical guide to the diagnosis and treatment of the most common disorders of red blood cells, white blood cells, and hemostasis. Each disease state is discussed in terms of the underlying pathophysiology, clinical features that suggest the diagnosis, the use of state-of-the-art laboratory tests in the diagnosis and differential diagnosis of the condition, and current management strategies. For the student, specific chapters discuss a systematic approach to the workup of a patient with hematologic disease, providing a foundation for clinical training.

We would like to thank James McArthur and John Boller of the University of Washington's Health Sciences Center for Educational Resources for the color photographs selected from the American Society of Hematology National Slide Bank; Catherine Hartung for the artwork; and Jacqueline Hedlund for her editorial assistance.
