isbn:9780071423021

The most effective self-assessment tool for any clinician who interprets ECGs! This unique resource offers 200 full-sized, three-channel ECGs with lead II rhythm strips, in a format that parallels the cardiology board exam. Each ECG is accompanied by a brief

clinical history and followed by a narrative interpretation and board simulation, along with references for further study. A special bonus is the comprehensive section that provides diagnostic criteria for common electrocardiographic diagnoses. This book is perfect for boards in cardiology, critical care, and anesthesiology - or for clinical practice. It features 200 full-size, three-channel ECGs with rhythm strip. Each ECG is accompanied by a brief clinical history in board format. It provides narrative and board-type interpretations on facing page. ECGs range from simple to complex, reflecting conditions both common and rare. The review of diagnostic criteria for common electrocardiographic diagnoses is included. References are provided for further research or study. This is the ultimate study aid for certification, re-certification, CME - or as a clinical refresher - this unique skill- and knowledge-building tool will help you to hone your skills in interpreting cardiac arrhythmias and other electrocardiographic abnormalities, as well as help you to effectively correlate ECG data with clinical information. More than just a study guide, this one-of-a-kind resource includes reference material that every electrocardiographer will find useful in daily clinical practice.
