A practical, illustrated guide to the new International Building Code

With the publication of the International Building Code, the building industry is moving

toward a single universal set of construction codes, rather than the three regional codes previously in use. Now more than ever, architects need an interpretive guide to understand how the building code affects the early design of specific projects. This unique reference blends the graphic skills of bestselling author Francis Ching with the code expertise of Steven Winkel. It closely examines the portions of the building code that are most relevant for the architect and provides a simple and practical interpretation through words and illustrations. All the changes in the new code are explained in simple, user-friendly language that allows architects to get up to speed on the new code quickly and easily.

Francis D. K. Ching (Seattle, WA) is a registered architect, a professor at the University of Washington, and the author of eight highly acclaimed architecture books, all for Wiley.

Steven R. Winkel, FAIA (San Francisco, CA), is a project manager at Field Paoli, and an expert in building codes and regulations. He is also an AIA Board Member and past president of the AIA California Council.
