Modding Mac OS X starts out with the very basics of showing you how to configure your

Find hidden features in your favorite applications

Dive inside application bundles to find hidden resources

Change application and system-wide keyboard shortcuts

Work with the Property List Editor to read and edit property list files

Wrap your head around the defaults command to tweak an application's settings

Hack on NIB files to change an application's interface

Control an application with AppleScript, even if it isn't scriptable</p>

Each Modding example includes detailed step-by-step instructions that even a novice Mac user can follow, while also providing the necessary detail to satisfy the experienced hacker. The knowledge you gain from tweaking one application can be easily applied to the next.</p>
