This manual is the official definition of Lua 5.1. It covers Lua's syntax and semantics, the full API with C, and the standard libraries. Lua is an extension programming language designed to support general procedural programming with data description

facilities. It also offers good support for object-oriented programming, functional programming, and data-driven programming. Lua is intended to be used as a powerful, light-weight scripting language for any program that needs one. Lua is implemented as a library, and is highly portable, being written in clean C (that is, in the common subset of ANSI C and C++). This printed version contains the full text of the eletronic version, available at http: //www.lua.org/manual/.

5.2 Reference Manual

特有用

其实就是Manual的纸质版，一门语言最好的语法教程还是BN范式

看的是云风的半拉子中文版，：）
