</U> This book offers a pragmatic, reader-friendly approach that helps teachers explore, evaluate, and effectively integrate the full range of instructional technologies they are likely to find in their classrooms. </U> Founded in learning theory and instructional design, this book explores the current and emerging technologies

available to teachers while consistently maintaining an instructional focus. Using practical applications and real-world examples, the book offers readers the opportunity to explore technologies as tools to enhance and support instruction. It culminates with an exploration of the teacher's role in technology planning and in ensuring its ethical implementation. The reader will find Web activities and a wide range of activities in each chapter including reviews, group, critical thinking and hands-on experiences. </U> Teachers and technology coordinators.
