Drawing on complex systems theory, this book investigates how human societies deal with change in linked social-ecological systems, and build capacity to adapt to change. The concept of resilience is central in this context. Resilient social-ecological systems have the potential to sustain development in a manner that does not lead to loss of future options. Resilient systems provide capacity for renewal and innovation in the face of rapid transformation and crisis. Case studies and examples from several geographic areas, cultures and resource types are included; merging forefront research from natural sciences, social sciences and the humanities into an innovative framework for sustainable systems.
