isbn:9780596526863

This popular Build-It-Yourself (BIY) PC book covers everything you want to know about building your own system: Planning and picking out the right components, step-by-step instructions for assembling your perfect PC, and an insightful discussion of why you'd want to do it in the first place. Most big brand computers from HP, Dell and others use lower-quality components so they can meet their aggressive pricing targets. But component manufacturers also make high-quality parts that you can either purchase directly, or obtain through distributors and resellers. Consumers and corporations alike are opting to build rather than buy PCs to ensure high quality and compatibility. The new edition of Building the Perfect PC shows you how to construct a variety of top-flight systems with the latest technology, including AMD Socket AM-2 and Intel Core 2 processors, that are Vista- and Linux-ready. The book includes several new options, including: A Budget PC you can build for approximately \$350 that offers performance and reliability similar to that of mainstream systems A full-blown media-center system that runs Linux and MythTV or Windows MCE with multiple tuners and HDTV support A fire-breathing high-performance gaming system A fast, low-power, low-heat, low-noise, Small Form Factor system (the size of a shoe box) A low-cost SOHO (small office, home office) server system with a 2 terabyte (2,000 GB) disk

subsystem that's suitable for a residential environment rather than a server closet. Regardless of your technical experience, "Building the Perfect PC" will guide you through the entire process of building or upgrading your own computer. You'll use the latest top-quality components, including Intel's Core 2 Duo and AMD's Athlon X2 CPUs. And you'll know exactly what's under the hood and how to fix or upgrade your PC, should that become necessary. Not only is the process fun, but the result is often less expensive and always better quality and far more satisfying than anything you could buy off the shelf.
