Book Description

My Best Book of the Moon

Follow in the footsteps of the Apollo astronauts and explore our planet's only moon. Find out what it was like to travel nearly 385,000 km from the Earth, and how the astronauts studied the lunar landscape when they got there. Take a closer look at the Moon's far side, never seen by humans until a robotic space probe visited it in 1959. Step-by-step illustrations explain the Moon's phases and reveal how it may once have been a part of the Earth, while evocative full-page scenes recreate the excitement of taking those famous first steps onto the lunar surface.
