The interactions of biogeochemical cycles influence and maintain our climate system. Land use and fossil fuel emissions are currently impacting the biogeochemical cycles

of carbon, nitrogen and sulfur on land, in the atmosphere, and in the oceans.

This edited volume brings together 27 scholarly contributions on the state of our knowledge of earth system interactions among the oceans, land, and atmosphere. A unique feature of this treatment is the focus on the paleoclimatic and paleobiotic context for investigating these complex interrelationships.

* Eight-page colour insert to highlight the latest research

* A unique feature of this treatment is the focus on the paleoclimatic context for investigating these complex interrelationships.
