装帧:Paperback

isbn:9780201633580

This book provides an in-depth introduction to writing 32-bit Windows applications using C++ and the Microsoft Foundation Class (MFC) library. The text builds from the ground up, first describing the Windows architecture and showing how MFC works with

that architecture; next covering the document/view framework that simplifies the creation of industrial-strength programs; and finally illustrating advanced concepts like the usage of dynamic link libraries (DLL), creating Internet clients, and building form-based applications. MFC Programming answers the hard questions by diving below the surface presented in the Reference Manual.
