This graduate level text on economic growth surveys neoclassical and more recent growth theories, stressing their empirical implications and the relation of theory to data and evidence. The authors have undertaken a major revision for the long-awaited second edition of this widely used text, the first modern textbook devoted to growth

theory. The book has been expanded in many areas and incorporates the latest research. After an introductory discussion of economic growth, the book examines neoclassical growth theories, from Solow-Swan in the 1950s and Cass-Koopmans in the 1960s to more recent refinements; this is followed by a discussion of extensions to the model, with expanded treatment in this edition of heterogeneity of households. The book then turns to endogenous growth theory, discussing, among other topics, models of endogenous technological progress (with an expanded discussion in this edition of the role of outside competition in the growth process), technological diffusion, and an endogenous determination of labor supply and population. The authors then explain the essentials of growth accounting and apply this framework to endogenous growth models. The final chapters cover empirical analysis of regions and empirical evidence on economic growth for a broad panel of countries from 1960 to 2000. The updated treatment of cross-country growth regressions for this edition uses the new Summers-Heston data set on world income distribution compiled through 2000.

神秘的汉密尔顿函数，我终于搞懂它和拉姆齐模型了！

像比较Acemoglu的其实这本更加简练而且更加accessible

大爱各种模型的variation(ch5,6,7)!

This is an amazing book. You can find novel interpretations even where you expect sheer cliché.

Xavier本人太可爱。

大三经济增长课看了老师要求的章节，非常经典的教材，当时读得非常艰难，多年以后才意识到，自己一直以来在研究方法上的趣味可能就已经从根本上决定了自己不大适合学growth theory。。。

读这本书其实可深可浅，即使看不懂复杂的数学证明过程，看文字性的描述也可以理解的差不多，推荐

Good but basically growth theory is almost dying..

附录：静态优化、变分法&控制论
以前学习的顺序大概是静态优化--变分法--控制论，讲控制论是静态优化的连续形式，讲变分法是控制论的特例，只是给了一些直觉，比如控制论里的adjoint variable和静态优化里的Lagrange multiplier很像，比如在变分法的问题里设一个control va...
