出版时间:1993-09-01

装帧:Paperback

isbn:9780811803298

The beauty and symmetry of the natural world come alive in this inspired collaboration between acclaimed nature photographer William Neill and San Francisco's famous hands-on science museum, the Exploratorium. Exquisite, full-color photographs unveil the secret blueprints of nature often overlooked by the casual observer: the spiral forms that appear in seashells, spiderwebs, and the heart of a daisy; the hexagons found in honeycombs and cracking mud. Through its captivating photographic content and accessible scientific examination, *By Nature's Design* reveals the order, economy, and elegance of nature's diverse forms in an engaging volume that will fascinate and inform art and nature lovers alike.
