著者:Kenneth N. Stevens

出版者:The MIT Press

出版时间:2000-7-31

装帧:Paperback

isbn:9780262692502

This long-awaited work presents a theory of speech-sound generation in the human vocal system. The comprehensive acoustic theory serves as one basis for defining categories of speech sounds used to form distinctions between words in languages. The author begins with a review of the anatomy and physiology of speech production, then covers source mechanisms, the vocal tract as an acoustic filter, relevant aspects of auditory psychophysics and physiology, and phonological representations. In the remaining chapters he presents a detailed examination of vowels, consonants, and the influence of context on speech sound production. Although he focuses mainly on the sounds of English, he touches briefly on sounds in other languages. The book will serve as a reference for speech scientists, speech pathologists, linguists interested in phonetics and phonology, psychologists interested in speech perception and production, and engineers concerned with speech processing applications.

aerodynamic process...还是how to build a car好看

捧茶。。

草草看了音段部分，假装看明白了好了

在Keith Johnson书中的力荐下读的，speech production角度的声学（虽然被同门吐槽对文科生不友好，哪里不友好了hhhh）
