出版时间:2002-05-02

装帧:Paperback

isbn:9780091886578

"In the high-energy magic facility of Unseen University, the wizards have created a miniature cosmos that includes Roundworld, known to us as Earth. As they bicker over the meaning of this - to them - unfeasible and bizarre planet, we go on a tour of Big Science. From astrophysics to quantum mechanics, the interleaved chapters give us a briefing on the history and the present state of play of our scientific learning, while stressing always the limits of our knowledge--. The tone is intelligent and humorous (think *Horizon* with laughs) and demands an intellectual engagement on the part of the reader. The result is a book in which the hard science is as gripping as the fiction--one for anyone with an interest in where science comes from and where it is going." - *The Times*

评论

借discworld講科學歷史及思想發展，很多發人深思的問題，自然比Hawking的A Brief History of Time好看 :D

书评

This book gets you thinking about the way you see the world.
