著者:George Peacock

出版者:Dover Pubns

出版时间:2004-12

装帧:HRD

isbn:9780486439150

This historic 1830 text gave algebra a logical treatment comparable to Euclid's Elements, separating arithmetical from symbolic algebra. Appropriate for upper-level undergraduates and graduate students, this first book of a two-volume set is devoted to the exposition of the principles of arithmetical algebra and their application to the theory of numbers and arithmetical processes.1940 edition.

Unabridged republication of the edition published by Scripta Mathematica, New York, 1940.
