Will new information technologies, especially the Internet, bring freedom and democracy to authoritarian China? This study argues that the Internet has brought about new dynamics of socio-political changes in China, and that state power and social forces are transforming in Internet-mediated public space. Its findings are fourfold. First, the Internet empowers both the state and society. The Internet has played an important role in facilitating political liberalization, and made government more open, transparent, and accountable. Second, the Internet produces enormous effects which are highly decentralized and beyond the reach of state power. Third, the Internet has created a new infrastructure for the state and society in their engagement with (and disengagement from) each other. Fourth, the Internet produces a recursive relationship between state and society. The interactions between the state and society over the Internet end up reshaping both the state and society.

国内关注郑永年的朋友多是通过《联合早报》的专栏,郑教授对中国问题的分析几乎深入到与政治相关的各个领域,在他庞杂的研究中,有一条清晰的主线,总离不开"国家—社会"在不同问题领域中的互动关系,这本《技术赋权:中国的互联网、国家与社会》也是如此。在有...
