isbn:9780300119800

Leading researchers discuss what is now known about the effects of climate change on the natural world. They examine recent trends in and projections about climate

change; ways that particular organisms are responding to climate change; conservation challenges, including social and policy issues; and more.

"This book will be a milestone in the emerging discipline of climate change biology. No issue is more important for the global environment; the impressive line-up of experts here gives it definitive coverage."—Edward O. Wilson, Harvard University

"A well-written treatise on the past, present, and future effects of climate change on plant and animal biodiversity. . . . It is destined to become a classic."—Choice
