Book Description

Reusable components and patterns for Ajax-driven applications

Ajax is one of the latest and greatest ways to improve users' online experience and create new and innovative web functionality. By allowing specific parts of a web page to be displayed without refreshing the entire page, Ajax significantly enhances the experience of web applications. It also lets web developers create intuitive and innovative interaction processes.

Ajax for Web Application Developers provides the in-depth working knowledge of Ajax that web developers need to take their web applications to the next level. The book shows how to create an Ajax-driven web application from an object-oriented perspective, and it includes discussion of several useful Ajax design patterns.

This detailed guide covers the creation of connections to a MySQL database with PHP 5 via a custom Ajax engine and shows how to gracefully format the response with CSS, JavaScript, and XHTML while keeping the data tightly secure. It also covers the use of four custom Ajax-enabled components in an application and how to create each of them from scratch.

The final section of the book combines the individual code examples and techniques from earlier chapters of the book into one larger, Ajax-driven application—an internal web mail application that can be used in any user-based application, such as a community-based web application. Readers will learn not only how to create and use their own reusable Ajax components in this application

but also how to connect their components to any future Ajax applications that they might build.

作者介绍:

About the Author

Kris Hadlock has been a contract web developer and designer since 1996. He is a featured

columnist and writer for InformIT and numerous web design magazines. He is

also the founder of Studio Sediton, a web application development firm, and is the

cofounder of 33Inc, the company responsible for DashboardHQ. He maintains a blog

called Designing with Code, which focuses on web application development from a design

perspective and often features useful code snippets to help enhance web applications. You

can find all of the above and more about Kris on his website at [www.krishadlock.com](http://www.krishadlock.com).
