《工业与应用数学中的一些问题(英文版)》主要内容：The Shanghai Forum on Industrial and Applied Mathematics was organized in May 2006 on the occasion that many famous industrial and applied mathematicians gathered in Shanghai from different countries to participate in the Officers' Meeting and the Board Meeting of the ICIAM (International Council for Industrial and Applied Mathematics). This volume collects the material covered by the majority of the lectures of which reflects panoramically recent results and trends in industrial and applied mathematics. This book will be very useful for graduate students and researchers in industrial and applied mathematics.

作者介绍:

目录: Front Matter

Samir Adly, Daniel Goeleven, Michel Théra: A Continuation Method for a Class of Periodic Evolution Variational Inequalities

Götz Alefeld: Complementarity Problems: An Overview on Existing Verification Procedures

Fernando Antoneli, Ana Paula S. Dias, Martin Golubitsky, Yunjiao Wang: Synchrony in Lattice Differential Equations

Alain Damlamian: The Periodic Unfolding Method for Quasi-convex Functionals

Iain S. Duff: Sparse System Solution and the HSL Library

Heinz W. Engl, Gerald Goekler, Andrea Schatz, Helmut Zeisel: Modelling and Numerics for the Transient Simulation of the Blast Furnace Process

Loredana Faienza, Antonio Fasano, Mario Primicerio: Gelification of Hydrocarbons: A Model Problem

Nguyen Van Huu, Vuong Quan Hoang: On the Martingale Representation Theorem and on Approximate Hedging a Contingent Claim in the Minimum Deviation Square Criterion

Rolf Jeltsch, Manuel Torrilhon: Flexible Stability Domains for Explicit Runge-Kutta Methods

Taketomo Mitsui, Yoshihiro Saito: MS-Stability Analysis for Numerical Solutions of Stochastic Differential Equations—Beyond Single-step Single Dim—

R.D. Russell, J. F. Williams, X. Xu: A Comparison of Direct Discretization of 4th Order Problems Versus System Reduction

Ya-xiang Yuan: Subspace Techniques for Nonlinear Optimization
