《色谱进展》 On behalf of the DISEC Organisation, WelcometoDalian, WelcometoChina
TheproceedingsofDISEC2007serveastheformalrecordofthescientificprogram, covering

the three separate Symposia that constitute the meeting.

The meeting promises to be a major celebration of separation science, and the separation science community has thrown its weight behind this Symposium. The meeting is held under the auspices of the “International Organization for Promotion of

Microcolumn Separations” and the “Chinese Academy of Science” with support from various organizations in China, and leading international companies in the separation sciences. Combining the “30th International Symposium in Capillary Chromatography”, “4th Comprehensive Two-dimensional Gas Chromatography Symposium” and the “16th Chinese Symposium and

Exhibition on Chromatography,” the conference will offer many opportunities to present both international and regional accomplishments in chromatography. During the period of the Symposium an exhibition will be held to show case newly developed instruments, peripheral devices and reagents from manufacturers around the world. Additionally, a short course on GC × GC and Bioanalytical LC-MS will be held on Sunday June 3.

No other internationally scheduled chromatography meeting has been held in China before. It should be seen not just as a convenient location and time to have a conference in China, in the build up to the Olympics, but also as the natural progression of Chinese and regional separation science research as a vigorous and competitive player on the world scene. Science is generally respected as a valuable pursuit in China and in the wider Asian region, as is witnessed by a demographic shift in research publication towards this region. Hence the engagement between researchers in Asia and the rest of the world is a natural and important development. Although the ICC meetings normally alternate annually between

Europe (Italy) and the USA, they have been held previously
