The Encyclopedia of Public Choice offers a detailed and comprehensive account of the

subject that deals with the intersection of economics and political science. Its fruitful exchange among ethics, moral and political philosophy, and law, as well as economics and political science, examines the image of man as a purposive and rational actor. Its balanced coverage, which reflects the various public choice methodologies and approaches, is thoughtful, comprehensive, lively, and original. It will be the definitive reference source for decades to come.

Volume I includes biographies of the major figures in public choice, those who set the scene for the disciplines and those who have made major contributions to its development and essays written by leading senior public choice scholars. Their important, and occasionally controversial, themes offer in-depth analysis and reflection beyond the scope of standard works.

Volume II defines in detail the core concepts associated with the discipline.

Advisory Board:

James M. Buchanan, George Mason University;

Bernard Grofman, University of California, Irvine;

Arye L. Hillman, Bar-Ilan University;

Martin Paldam, Aarhus University;
