## Book Description

The third volume in this exciting series presenting young architecture and design talents, ArchiLab's Earth Buildings turns its focus to building with the land. Projects from thirty of the most innovative young practices of today—including Field

Operations, Tom Leader, NOX, Servo, Vicente Guallart, and Kengo Kuma—confront and offer proposals and solutions to issues such as dwindling natural resources, land engineering, the city as ecosystem, and the sensitive development of brown sites. Presented through extensive plans, computer renderings, and photographs, buildings and large-scale schemes reveal an almost infinite array of breathtaking ideas for the future, an inspiration for a generation of designers, practitioners, and policymakers.

Essays by international critics Frédéric Migayrou, Bart Lootsma, Manuel Gausa, and others consider the earth's economy and suggest how contemporary architects might best and most responsibly respond to our fragile planet in a technology-driven age. Over 600 color illustrations.

## 评论

这本书实在是没有太多实质内容，虽然乍一看挺先锋的。
