Brain, body, and world are united in a complex dance of circular causation and extended computational activity. In *Being There*, Andy Clark weaves these several threads into a pleasing whole and goes on to address foundational questions concerning the new tools and techniques needed to make sense of the emerging sciences of the embodied mind. Clark brings together ideas and techniques from robotics, neuroscience, infant psychology, and artificial intelligence. He addresses a broad range of adaptive behaviors, from cockroach locomotion to the role of linguistic artifacts in higher-level thought.

highly recommended, but not like Clark that much any more.

这本书主题是Emergentism，4E理论如何回应认知科学里brain和representationalism的。传统和激进的中道。最后一部分讲语言作为一种scaffolding很有趣，帮我解锁了维果茨基的作品。看完想给作者生猴子。
