装帧:Hardcover

isbn:9783937975009

A vast source of information on the much feared and misunderstood pitvipers. Paying particular attention to the incredible variation found among pitvipers, this book is the first ever colour presentation of all Asian representatives of the sub-family Crotalinae known to date. Containing all English common names, pholidotic data, annotated check lists (currently valid nomenclature and systematics, citation of the original description, information on type material, distribution, as well as explanatory comments), colour plates (including detail and habitat photos), coverage of relevant

literature, and a systematic index.
