Every system needs an escape valve, a decompression mechanism. In professional graphic design, this escape device is more than the ‘escape’ (esc) on a keyboard; it is the visual seduction by new and experimental formulas. This is the defining concept of emergent Spanish design today. Spain has become an international laboratory where creators from all over the planet retro-nourish and influence one another.

Works by Basedesign, Ipsum Planet, Enric Jardí, Paco Bascuñán, among many others.
