著者:Stephen M. Stigler

出版者:Belknap Press

出版时间:1990-3-1

装帧:Paperback

isbn:9780674403413

## Review

Journal of Modern History : The book is a pleasure to read: the prose sparkles; the protagonists are vividly drawn; the illustrations are handsome and illuminating; the insights plentiful and sharp. This will remain the definitive work on the early development of mathematical statistics for some time to come.

--Lorraine J. Daston

Science : An exceptionally searching, almost loving, study of the relevant inspirations and aberrations of its principal characters James Bernoulli, de Moivre, Bayes, Laplace, Gauss, Quetelet, Lexis, Galton, Edgeworth, and Pearson, not neglecting a grand supporting cast...The definitive record of an intellectual Golden Age, an overoptimistic climb to a height not to be maintained.

--M. Stone

New York Times Book Review : One is tempted to say that the history of statistics in the nineteenth century will be associated with the name Stigler.

--Morris Kline

Contemporary Psychology : In this tour de force of careful scholarship, Stephen Stigler has laid bare the people, ideas, and events underlying the development of statistics...He has written an important and wonderful book...Sometimes Stigler's prose is so evocative it is almost poetic.

--Howard Wainer

## Review

Stigler's book exhibits a rare combination of mastery of technical materials, sensitivity to conceptual milieu, and near exhaustive familiarity with primary sources. An exemplary study

--Lorraine Daston

## 作者介绍:

李金昌，统计学博士，教授，博士生导师。浙江工商大学党委副书记。教育部高等院校经济学教学指导委员会委员，国家社科基金学科评审组专家。先后主持研究国家自然科学基金、国家社会科学基金项目4个、省级基金项目7个（含重点重大项目），主持研究其他项目多个。
