A lot of people are into Making their own technology these days, from 3D printers to home-made robots, Digital Video Records (DVRs), Media Centers, and more. But it you’ re a computer programmer you might not know the ins and outs of the hardware side of these projects.

Caleb Tennis explains it all. From a quick look at basic physics (including fun with magnets) to electronic circuits, power supplies, and networking, you’ ll see how it all works—and how to make it work for you.

作者介绍:

Caleb Tennis is a professionally trained electrical engineer with a strong background in both hardware and software. Caleb has written for multiple publications including LinuxJournal and is the author of Rapid GUI Development with RubyQt. Caleb works for a small research and development firm working on innovative controls for diesel engine technologies.
