<HTML>Practical Visual C++ takes a straight forward, no-nonsense approach to teaching C++. You start by learning the basics of Developer Studio with the use of the Wizards, editors, and debuggers. Then move on to the core language, including program flow, data types, functions, classes, object-oriented programming, and more.

You then progress into the Microsoft Foundation Classes (MFC), the libraries of pre-build classes that Microsoft provides to make Visual C++ programming much easier. By understanding how to use the classes within MFC, you will be able to create nearly any type of program. Specific coverage includes working with dialogs, objects, controls, document-views, file manipulation, and printing.</HTML>
