出版者:Springer

出版时间:1993-09-29

装帧:Hardcover

isbn:9780387978406

This volume presents facts and theories concerning the major topics in detection, discrimination, and perception of sounds by humans. The six review articles provide an invaluable summary of our knowledge of psychophysics to students and established investigators in auditory research, including neuroscientists, behavioral scientists, and acoustical physicists/biophysicists.
