In light of the popularity of "therapeutic touch" (TT) (an estimated 40,000 practitioners), a rational, critical evaluation of its effectiveness is long overdue. This anthology of research articles illuminates every aspect of the subject, including the physics of the claimed "human energy field"; detailed discussions of the most recent research into the efficacy of TT; an account of the origins and history of the practice, plus a separate review of skeptics' work to get the facts out to the public and the medical community; several reports that present the best case for this new therapy; a consideration of the ethical implications of this practice; and more.
