出版者:Addison-Wesley

出版时间:2005-3

装帧:Pap

isbn:9780805339567

In this booklet, Professor David Wessner of Davidson College gives a brief examination of HIV, the immune system, and AIDS. Also included within this introduction is a discussion of modern research on drugs and the search for an effective vaccine. Finally, this booklet addresses important global issues associated with the HIV/AIDS pandemic; including access to affordable healthcare, distribution of condoms, and the empowerment of women. HIV and AIDS will give students a greater understanding of HIV/AIDS and the many issues associated with the disease.
