isbn:9781850709763

This is an especially handy, low-cost pocket guide of nearly 60 full-colour illustrations of skin disease manifestations in HIV infection. The illustrated diseases range from HIV seroconversion and persistent generalized lymphadenopathy to drug-induced skin rashes and vasculitis. Others include seborrheic dermatitis, eczema, psoriasis, fungal disease and infection, molluscum contagiosum, viral warts, herpes simplex, herpes zoster, and bacterial infections, bacillary angiomatosis, mycobacteria ulcer, syphilis, papulopruritic eruptions, and eosinophilic pustular folliculitis plus a detailed section on Kaposi's sarcoma. An excellent quick-reference handbook for practitioners and hospital staff.
