出版者:Routledge

出版时间:2005-06-14

装帧:Paperback

isbn:9780415949392

An excellent introduction to the history of technology and science, with an innovative framework for understanding the cultural ramifications of innovations in engineering, medicine an biotechnology. These leadng authors survey scientific and technological developments in the United States, Europe and Asia over a 500 year period, focusing on the key achievements of different communities. Rather than adopting the conventional production oriented perspectives that relegate the broader social and cultural ramifications to the background, Hard and Jamison highlight how societies have tamed the hubri that is fundamental to the innovative spirit.
