装帧:Pap

isbn:9781841766324

The US Army requirement for a light utility helicopter was formulated after the Korean War. Bell's Model 204 design won a competition in 1955, and was given the military

designation H-40, later renamed the HU-1 Iroquois. The original design called for a helicopter that could be used for transport, airborne battlefield command and control, medical evacuation, fire support co-ordination and search and rescue. Later its missions would be expanded to include troop insertion/extraction, armed escort and special operations. This title details all the technological background behind the development and use of the Huey 'Slick' in Vietnam, as well as covering all the major uses that this transport aircraft was put to.

贝尔UH-1 HEY “SLIKES”

“吉普在二战对于盟军的意义就等于休伊直升机在越南对于美国的意义。” 鱼鹰的科普

小册，虽然是00年后的书，但只写到了75年，很是想看后来陆战队和空军的双发休伊的发展历程和作战应用。
