Nga Tai Matatu: Tides of Maori Endurance describes and analyzes the position of the Maori people and Maori interests at the start of the third millennium. It also recognises the journeys from the past and makes projections into the future. The book provides a comprehensive analysis of research relating specifically to Maori over many fields. It presents a carefully structured and argued overview of the background, history, experience, and aspirations of the indigenous people of New Zealand, and develops a wide-ranging framework within which Maori development can be considered.
