A Choice Outstanding Academic Book, Science Fiction Before 1900 is an accessible and fascinating overview of the evolution and early history of science fiction.

Investigating works that marked significant turning points in the early evolution of the genre, including Frankenstein, Twenty Thousand Leagues Under the Sea, A Connecticut Yankee in King Arthur's Court and The Time Machine, Paul Alkon places these works in context. He also discusses science fiction and its complex relationship to other genres. This book will be a great addition to the emerging field of science fiction study.
