For students of medicine and those who practice in the front-line of medicine in Africa,

this fully revised edition combines classical internal medicine with a rich understanding of the major influences on health and disease in Africa. It puts disease into the context of family and culture and is not afraid to address the effects of inequality on health and the problems of limited resources for health care. There is a much expanded section on non-communicable diseases as well as comprehensive accounts of HIV/AIDS, malaria, tuberculosis and other major infections in the continent. Forward-looking and evidence-based, this new edition reflects the emergence of new diseases and health risks in the region. Compiled by the foremost international authorities, this is the one essential text for the medical student, medical officer, or postgraduate student wanting the most complete and up-to-date reference book on medicine in Africa.
