出版者:F a Davis Co

出版时间:2003-4

装帧:Pap

isbn:9780803611047

This handbook takes the student through the evaluative procedures for palpation, range of motion, neurologic, ligamentous and special tests. The quick-reference resource is suitable for classrooms, laboratories, clinical settings and professional practice. Key features include: 32 palpation photographs with anatomical overlays to help students identify the underlying structure; 15 evaluation maps to guide students through the seven-step process for the body region being evaluated; and quick-reference boxes of instructions showing position of patient and examiner, evaluative procedure, positive test results and implications.
