This guide to the proper use of the ECG in diagnosing acute myocardial infarction puts the combined experience of international authorities at your fingertips for immediate use. In *The 12 Lead ECG in ST Elevation MI: A Practical Approach for Clinicians*, Drs. Bayés de Luna, Fiol-Sala and Antman supply the practical, specific information you need to determine which patients with ACS are showing ST elevation. To facilitate correct diagnosis and guide management, the authors use a consistent sequence to explain the ECG abnormalities for each site of coronary occlusion. A schematic of the coronary tree illustrates the point of occlusion.

The second part of the book contains a self-assessment section with a series of 15 cases, each of which includes one or more 12-lead ECGs for analysis. These valuable examples help you prepare for on-the-spot interpretation in the emergency department or intensive care unit.
