Sweeping changes in infection control and disease containment have had a significant impact on dentistry in the past decade. Because dental assistants are more likely to

assume responsibility for this area of dental practice, it is necessary that students enrolled in dental assisting programs receive stringent training and education in infection control and environmental health. Infection Control for Dental Assistants addresses the requirements of the national Infection Control Examination (ICE) as set forth by the Dental Assisting National Board (DANB) Task Analysis. The text is separated into five major areas according to their relevance to the dental assistant's role in infectious disease prevention, and contains numerous hands-on procedures and assessment questions designed to help readers track their comprehension and retention of presented material. Infection Control for Dental Assistants will also be helpful as a refresher resource for dental assistants already in private practice and as a chairside reference.
