出版时间:2005-9

装帧:Pap

isbn:9780736042697

Aimed at students training in cardiac rehabilitation, as well as a reference text for cardiac rehabilitation professionals. Provides in-depth information on many important topics that comprise contemporary cardiac rehabilitation and secondary prevention of

coronary artery disease. Covers new topics including the atherosclerotic disease process, cardiovascular and exercise physiology, exercise prescription and the electrocardiogram. Addresses heart disease in women, elderly persons, individuals with diabetes or chronic heart failure and patients who have had heart transplantation.
