Although pancreas transplants have been performed for more than 30 years, the last few years have witnessed significant growth in the options available for pancreas

transplantation. Transplantation of the Pancreas, edited by Drs. Gruessner and Sutherland provides a state-of-the-art, definitive reference work on pancreas transplantation for transplant surgeons and physicians as well as for endocrinologists, diabetologists, nephrologists, and neurologists. The editors, from the renowned University of Minnesota Transplant Division and the Diabetes Institute, have assembled a group of renowned experts to provide an all-inclusive overview of pancreas transplantation. The text features insights on the pathophysiology of diabetes mellitus and the limitations of nontransplant treatments, highlights experimental research and clinical history of pancreas transplantation, and compares and contrasts different surgical procedures. The discussions detail the broad spectrum of post-transplant complications and their treatments, which frequently require skills in general, vascular, and laparoscopic surgery; interventional radiology; critical care; and infectious disease. Chapters on pretransplant evaluation, immunosuppression, immunology, pathology, long-term outcome, quality of life, and cost-effectiveness focus on issues unique to pancreas recipients. Evolving areas, such as pretransplant evaluation of pancreas transplant candidates, living donation, and the current status of islet transplantation are discussed. Augmented by more than 280 illustrations, including full color line drawings created exclusively for the text, this book is the standard reference for all transplant professionals as well as for all physicians caring for the transplant patient.
